

About:
Information about Farming for Health, our community, and some key resources.

Members:

- Find other members and read their profile.
- Create your own profile or link to other online profiles (e.g. via LinkedIn or Facebook)

Archive:
With information and resources from previous activities, including our annual events. Something missing? Please add!

Countries:

- Room for national CoPs, or (groups of) members from various CoP countries to update the community on national developments in green care.
- Next to directly creating one or more key pages, countries are recommended to use RSS feeds. Contact the webmasters (see Help) for support.

The **Farming for Health** website is a great way of providing some key information to each other and outsiders about our community and the activities developments in our domain. This sheet gives you some basic info. Go to Help > Contact to get support.

International CoP Workshop Italy 2009 - Farming for Health

This is what a Delicious list of links looks like:

Publish news on Farming for Health website:

Tag your resource “ffhweb_news” if you want it to appear in the news section of the Farming for Health website.

Tag your resource “ffhweb_links_italy” if you want the link to appear in the list of links on the Farming for Health website under Links > Italian.

You can create such an automatic update on your own website too. The webmaster can copy and paste a code on your website to make that connection. See here: <http://delicious.com/help/linkrolls> or get support via Help > Contact on the Farming for Health website.

Finding interesting resources:

Go to: <http://delicious.com/tag>. By searching the tag “farming_for_health”, you will find interesting resources saved by others from our CoP. Combine with other tags (e.g. “Norway” or “autism”) to specify your search.

Delicious.com is a tool with which you can store online resources (i.e. links to websites, documents, pictures, videos). It works like your favourites. The only thing different is that you have your favourites with you on any computer in the world that has an internet connection.

Delicious makes it easy to share these resources with others, for example with CoP members, for example via a connection that automatically publishes your most recent links to the CoP website. This sheet gives you some basic info. Go to Help > Contact on the Farming for Health website to get support.

Toolbar / browser buttons:

Using Delicious to store your links works best if you install these buttons in your browser. Whenever you are at a website you would like to store or share with others, click TAG Delicious will help to store it within seconds.

Tagging:

Use labels, so called “tags”, to mark your links. Choose any tag that will help you track back your resources at a later stage, e.g. green_care, farm, Italy.

Make sure all your links that are interesting for other CoP members are tagged “farming_for_health”, next to any other tags you may choose.

RSS:

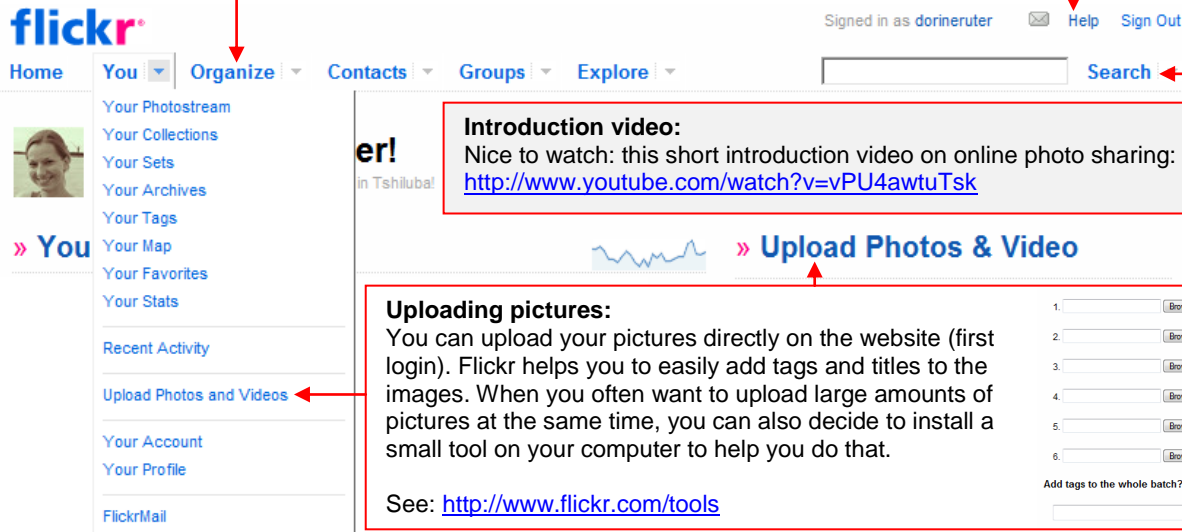

Delicious.com makes use of RSS. This helps you automatically publish your bookmarks on your weblog, your organisation website, or the Farming for Health website.

Edit a batch of photos:
Flickr also helps you organize a batch of photos all at once. E.g. if you want to add a tag to a large number of photos in one go.

Help:
The Help tool provides basic support and answers on frequently asked questions.

Flickr is a tool for uploading your pictures to the web. You can use it to share pictures from e.g. study visits to (foreign) farms, pictures from conferences, from flip charts you used at meetings and professional brainstorm sessions.

Introduction video:
Nice to watch: this short introduction video on online photo sharing:
<http://www.youtube.com/watch?v=vPU4awtuTsk>

Uploading pictures:
You can upload your pictures directly on the website (first login). Flickr helps you to easily add tags and titles to the images. When you often want to upload large amounts of pictures at the same time, you can also decide to install a small tool on your computer to help you do that.
See: <http://www.flickr.com/tools>

Search:
You can search your own photos or everyone else's, on full text or on exact tags.

Organizing your photos:
You can organize your photos in **Sets**. This helps you group different types of photos together, e.g. photos on a certain topic or pictures from an event. You can send your contacts the link of the set, or include that link on your website.

Tagging:
Next to organizing your pictures in a set, you can also use labels, so called "tags", to mark your pictures. Choose any tag that will help you track back your pictures at a later stage, e.g. green_care, farm, italy. Tagging is not only interesting for yourself, to find back pictures you uploaded long ago. It also makes picture sharing with others (people you know and those you don't know yet) very easy and interesting.

Make sure all your pictures that are interesting for other CoP members are tagged "farming_for_health" (and don't be shy! Many pictures ARE interesting), next to any other tags you may choose. Via the following link, you can then find anyone's pictures on this topic, if they were uploaded to Flickr:
<http://www.flickr.com/photos/tags/farmingforhealth>.

If you don't want to buy an account to create a large number of sets (see above), you can make creative use of tags. For instance, all pictures made at the Pisa CoP meeting can be tagged "ffh_pisa2009". If you do so, you can send your contacts (CoP members, outsiders) the following link, and they will find all your pictures related to this event: <http://www.flickr.com/photos/yourname/tags/ffhpisa2009>

If other CoP members use the same link, ALL pictures in Flickr (from all CoP members together) can be found at: <http://www.flickr.com/photos/tags/ffhpisa2009>

When you have a free Flickr account, you can create 3 different sets. Users that buy an account for 18 EU per year can create an unlimited number of sets.

Creative Commons:
When you license your pictures with a Creative Commons (CC) license, you provide others with a chance to use your pictures (on their weblog, website, folder) as long as it is not on a commercial basis and they mention your name. You yourself can use CC pictures for your information material too! You can set your preferences so that all new pictures will automatically get a CC licence. Do this under You > Your account > Privacy and Permissions.

	A social network website: http://www.new.facebook.com/group.php?gid=25729744457
	A (professional) social network website: http://www.linkedin.com/groups?home=&gid=1965444
	Picture sharing website: http://www.flickr.com/photos/tags/farmingforhealth/ Use the tag "farming_for_health" to label your pictures.
	A social bookmarking website: http://delicious.com/tag/farming_for_health Use the tag "farming_for_health" to label your links.
	A video sharing tool: http://www.youtube.com (search farming_for_health) Use the tag "farming_for_health" to label your videos.
	A weblog tool to start your own (group) weblog: http://www.wordpress.com Use the tag "farming_for_health" to label your green care related weblog messages.

RSS:

RSS stands for Real Simple Syndication. Almost all web tools make use of RSS. It enables you to manage your own information on your own weblog, website or photo sharing site without having to go to the website of some group. RSS makes it possible to automatically send your latest info to the Farming for Health community website. Go to Help > Contact on the Farming for Health website to get support in setting up a connection between your web tools and e.g. the Farming for Health website.

Today's internet is a social place to be. Modern tools and websites make it easy to find each other online and to store and share information with others. The new generation of web tools is called **Web 2.0**.

CoP members can make use of these tools to stay connected and share their latest news and resources. Are you connected? This sheet gives you some basic info. Go to Help > Contact on the Farming for Health website to get support.

Email discussion list:

A very simple way to stay in touch on a daily bases is of course email. As a community, we have a discussion list or "mailing list" that you can use to send and receive messages to and from the community. You can subscribe to the list with a single message.

- To subscribe, send a message to majordomo@lists.lboro.ac.uk. Make sure the subject line of your message is empty. In the body (the message itself) you write only the words: *subscribe farmingforhealth* Nothing else! No name or signature!
- When you are subscribed, you can send a message to farmingforhealth@lists.lboro.ac.uk. This message will automatically be sent to all other subscribers of this list.
- When someone else sends a message to the list, using the address above, you will receive this message in your email inbox.

Contact Joe Sempik (J.Sempik@lboro.ac.uk) for help.
